

Technical data

- Tonneau shaped case in Rose Gold, White Gold or Platinum
- Guilloche dial
- Applied numerals and indexes in 18ct Rose gold
- Hand made blued steel hands by Paul Gerber
- Sub seconds positioned between 6 and 9
- Cylindrical sapphire front crystal
- Cylindrical sapphire case back held with 10 screws
- Bridges incorporate chamfered edges and «Côte de Genève» at a 33 degree angle
- 18 Jewels
- 4 Screwed gold-chatons
- Rose-gold gearing
- Paul Gerber Escapement (Patent pending)
- Screwed Breguet balance wheel
- Fine adjustment regulator
- Hand wind movement
- 36 hour power reserve
- Each watch is numbered and registered
- Croco Leather band, 18ct gold buckle with enamelled Paul Gerber logo
- Optional 18ct. Gold deployment buckle

«Paul Gerber Escapement»

After extensive research and development, Paul Gerber succeeded in designing and building a new escapement for which he filed an application for a patent. This novel escapement operates on the principle of equal opposing forces. It incorporates a large stationary wheel, a small impulse wheel and anchor. This new escapement incorporates 3 jewels.

Individually constructed movement

The Paul Gerber in-house Calibre 33 shaped hand wind movement is enshrined in a beautiful Platinum, White or Rose 18ct Gold tonneau shaped case. The Calibre 33 bridges are decorated with the «Côte de Genève» at a 33 degree angle. The edges of the bridges are chamfered. The movement incorporates 18ct Rose gold gearing and screwed down châtions, which give testimony to the precise methodical design and manufacturing of this unique time piece.

Unique Sub Second Display

For 10 seconds, the tip of the second hand disappears inside the case. Nevertheless, the seconds can be read at all times.

1. Paul Gerber Escapement
2. The leading edge of technology
3. Unique Sub Second display
4. Buckle with enamelled logo
5. Jewels in screwed gold-châtions
6. Tonneau shaped case

The Moon Phase

After countless hours of design, research and engineering, Paul Gerber finally accomplished his goal of incorporating a 6mm spherical moon in his new calibre 33 movement. Paul Gerber's inventive genius makes it possible that the moon phase once set, will be correct for 128 years. (Provided the watch was kept running for this period of time).

Half of the spherical moon is made of Lapis, representing the dark side of the moon, and the other half of the spherical moon contains 54 brilliant cut diamonds representing the full moon.

Individually constructed movement

The Paul Gerber in-house Calibre 33 shaped hand wind movement is enshrined in a beautiful Platinum, White or Rose 18ct Gold tonneau shaped case. The Calibre 33 bridges are decorated with the «Côte de Genève» at a 33 degree angle. The edges of the bridges are chamfered. The movement incorporates 18ct Rose Gold gearing and screwed down châtions, which give testimony to the precise methodical design and manufacturing of this unique time piece.

«Paul Gerber Escapement»
