

[Paul Gerber EPR 52 Micro Moon](#)

This soft-spoken master of miniaturization has constructed complication upon complication in his Zurich workshop basement since 1976.

But never has he invented something quite like his new patent-pending [EPR 52](#), which is designed to be added to any watch, thereby extending that watch's complicated capabilities irrespective of how much room there may be on the dial or in the movement.

Paul Gerber EPR 52 Micro Moon

Surprisingly, the EPR 52 is designed to be added to the strap rather than the watch itself. However, don't discount the precision moon because of its location: comprising 61 mechanical components and measuring a miniscule 12 x 5.5 mm, this mini moon is actually quartz-controlled and runs on a standard micro cell battery.

Paul Gerber EPR 52 Micro Moon

Gerber is selling the complication together with the strap, though the Micro Moon can be retrofitted into any existing strap as long as it meets the measurement requirements. Pricing for the EPR 52 plus strap starts at about \$1,070 and delivery time is approximately one month.
